HIGH SCHOOL DIPLOMA

PZS Przodkowo, Poland

Daniil Bilenko

UNREAL ENGINE C++ PROGRAMMER

SUMMARY

Experienced game developer proficient in Unity and Unreal Engine, with a strong background in designing and implementing complex systems, AI, and user interfaces. Highly motivated, quick to learn, able to perform under pressure, and fully accountable for delivering high-quality solutions.

WORK EXPERIENCE

Unreal Engine C++ Developer 04/2023 – 01/2024

Iron Fly Studio

- Engineered robust gameplay systems in C++ and provided designers with highly configurable Blueprint- exposed parameters to streamline iteration workflows.
- Executed rapid prototyping of gameplay features using Blueprint, enabling fast validation of design concepts.
- Designed and implemented adaptive, scalable UI in UMG with a focus on usability, layout consistency, and cross- resolution support.
- Developed advanced enemy AI leveraging Behavior Trees and Blackboards, including complex decision-making logic and modular behavior structures.
- Proven ability to learn quickly and adapt to new situations

Unity Game Developer

03/2022 – 02/2023

Ways

- Developed core gameplay systems and implemented new game features.
- Maintained and improved the existing codebase, ensuring stability and performance.
- Demonstrated strong debugging skills and effectively resolved complex technical issues.
- Designed and implemented enemy AI behavior, including decision-making and state management.
- Developed multiplayer functionality using Photon PUN 2, including synchronization and network logic.

Unity C# Developer

02/2024 – 10/2025

Baked Games S.A.

- Implemented a wide range of gameplay features in C#, focusing on clean structure, extensibility, and smooth player experience.
- Improved legacy systems by refactoring core components, reducing technical debt and increasing project maintainability.
- Performed in-depth diagnostics and troubleshooting, identifying hidden issues and providing reliable long-term fixes.
- Created intelligent enemy behaviors using custom AI frameworks, decision systems, and finely tuned reaction logic.
- Developed and integrated multiplayer functionality with Photon PUN 2, handling synchronization, event messaging, and client-server interaction.
- Contributed to post-launch development by producing additional content, including work on the DLC's, ensuring quality and consistency with the main game.
